An ISO 9001: 2008 Certified Company

THERMOWELLS for temperature instruments are recommended for all process system where pressure, velocity and corrosive material are present. The use of thermo well also permits instruments interchange or calibration check with out disturbing or shutting down the process stream. Available in bellow said type's .Available in MOC of SS 304, SS 316, SS446, INCONEL, hest alloys, and PTFE LINED OR COATED. Flanged Thermowells are recommended to be used on any application, where the temperature sensing element may be exposed to pressurized, corrosive or high velocity media. Additionally, using thermowells allows online sensor change or calibration check. Plug and Chain Thermowells are recommended to be used on any application, where the temperature sensing element may be exposed to pressurized, corrosive or high velocity media. Additionally, using thermowells allows online sensor change or calibration.
